Important Note:

Do not delay in seeking advice from a qualified, licensed medical professional about treatment for your cancer. The information presented here is in no way meant to discourage you from seeking medical advice about your cancer treatment, but hopefully will support you and your doctor to undertake 'smarter', more effective approaches to beat your cancer.

The information in this report is provided for educational and informational purposes only, and is not intended to be a substitute for the diagnosis, treatment and advice of a qualified, licensed medical professional. The information is provided to support your informed consent to any treatment program you may decide to undertake. Statements regarding alternative treatments for cancer have not been evaluated by the FDA, and the contents of this report may be considered controversial by the medical community at large. Hahnemann researched and experimented with the use of dilute amounts of the drugs to minimize these effects. To his surprise, he found that the potency of the medicine was increased while the side effects diminished.</p> <p>Homeopathy focuses on a complete healing rather than simply a temporary improvement. Further, it adheres to the philosophy of treating the entire person rather than one or two symptoms.</p>	<p>Search their database at http://nationalcenterforhomeopathy.org/resources/practitioners.jsp</p>

Finding a Biological Dentist

Biological dentistry is an approach to dental treatment, primarily caring for patients' health and safety from both a conventional and an "alternative healthcare" point of view. Biological dentistry is sometimes called holistic dentistry. It acknowledges and deals with the whole body and well-being of the patient, not just his or her teeth.

In biological dentistry, biocompatible materials are used to reduce toxicity – mercury amalgam use is avoided. Mercury amalgam removal is a common biological dentistry treatment. Detoxification, especially of residual mercury deposits in body tissues from amalgam is often done. All root canals are recognized as harbingers of infection ultimately compromising the immune system. Both mercury and the infection lurking in cavitations and root canals can contribute to degenerative disease that predisposes to cancer.

Several eminent alternative cancer physicians stress that a dental cleanup of mercury, root canals, cavitations and metal in the mouth is essential to get well. Learn more about biological dentistry in this section and find out how it can help you to take charge of your health.

1.	The Multidiscipline Alliance	<p>The Multidiscipline Alliance is a group of physicians and dentists who are sworn to apply a brand new concept to the practice of dentistry and medicine. FIRST, DO NO HARM.</p> <p>“For years, Dr. Hal Huggins [the founder of biological dentistry], referred dentists who had attended some of his seminars. But as time went on, many people called him back to complain that they were worse off than prior to having their amalgams removed. Investigation determined that many of these dentists were leaving out the majority of the Protocol recommended by Dr. Huggins and many were placing root canals. Root canals are far worse at creating degenerative and autoimmune diseases than mercury from amalgam. Dr. Huggins felt that he was directing people from the frying pan into the inferno of autoimmune disease so he stopped referring. To meet the public’s increasing demands for “safe” dentistry, Dr. Huggins started a Multi-Discipline Alliance of professionals and therapists who will “first do no harm”.</p> <p>Dr. Huggins and his team train these individual offices to practice the Huggins Protocol safely.”</p>	<p>Go to http://hugginsappliedhealing.com/ Email: info@drhuggins.com</p> <p>Huggins Applied Health 5082 List Drive Colorado Springs, CO 80919</p> <p>M – F 9am – 5pm MST</p> <p>Telephone: 1-866-948-4638</p>

8.	Dr. Javier Morales, D.D.S. and BioDental Studios	<p>Dr. Morales writes, "The Art of Healing in Biologic Dentistry first began when patients felt healthier after the removal of mercury and metal crowns. This eventually became the Art of Dentistry, when no metal existed on any surface of any tooth, and the patient could not visibly distinguish between fillings or crowns and their natural teeth.</p> <p>After seeing the "light" in this new age of dentistry, the patients' trust and comfort became the main focus. I offer conscious IV sedation, which allows me to finish the dental work in one appointment.</p> <p>The IV Conscious Sedation Procedure was first performed at our clinic in 1998 at Puerto Vallarta, Mexico under the guidance of Dr. Hal Huggins. He observed that with this sedation, the patient felt great and healed faster, no matter how extensive the surgery. And, the patients with a dental phobia returned, feeling a new confidence and security the next time they had to sit in the dental chair."</p>	<p>Dr Javier Morales P., D.D.S., Biologic Dental Care</p> <p>Tijuana, B.C. 9.	Torrie Crocker	Torrie Crocker credits Dr. Morales with saving her life and writes "I now dedicate my life to taking people to my dentist to get their amalgams (mercury fillings) out as well as root canals removed, crowns replaced, health-robbing bacteria cleaned from cavitations (holes in your jawbone caused from root canals and/or teeth pulled by a regular dentist), and other dental services. I do this because I truly believe in Dr. Morales. He is a dedicated professional and a humanitarian, keeping his prices low so that people can afford to get well."	Torrie further writes "For those of you wanting to see Dr. Morales and have specific questions that you feel are better addressed by phone rather than email or you wish to make an appointment or need an estimate, feel free to call me and I will call you back. 10.	Eric Davis, Australia	A Total Dental Revision (TDR) is the most important intervention for the vast majority of patients. For many people, dental toxins represent the greatest daily exposure to toxicity. This toxin exposure seems to be the greatest cause and aggravator of nearly all degenerative diseases, especially cancer. Mercury, incompatible dental metals, cavitations, dental implants, periodontal disease, and root canals must all be vigorously addressed. How Much Cancer Do you Have?

The Navarro Urine Test

One of the most accurate and simplest methods to measure how much cancer is in your body is a urine test that has a very good reputation for accuracy. The test was developed by a Dr. Navarro in the Philippines. By using this test multiple times over a period of several months, your progress can be measured. Here are the instructions taken from two of Bill Henderson's articles (links to these two articles are below):

Developed in the late 1930's by the renowned oncologist, the late Dr. Manuel D. Navarro [his son, also an M.D., currently does the test], the test detects the presence of Human Chorionic Gonadotropin (HCG) in urine. This marker indicates the presence of cancer cells even before signs or symptoms develop. Dr. Navarro found HCG to be elevated in all types of cancers.

The test is based on a theory proposed by Dr. Howard Beard and other researchers who contend that cancer is related to a misplaced trophoblast cell that becomes malignant in a manner similar to pregnancy in that they both secrete HCG. As a consequence, a measure of the amount of HCG found in the blood or urine is also a measure of the degree of malignancy. The higher the number, the greater the severity of the cancer.

Urine, as opposed to blood or serum, is the preferred specimen for the test. In 1980, Papapetrou and co-authors reported the correctness of the urine specimen to be used in HCG Immunoassay. In 32 proven

cancer cases, the immunoassay test gave 31 positive results using urine while only 12 positive results were reported using blood. It's believed that blood does not render an accurate reading because HCG undergoes glycosylation in the liver as it travels in the hepatic circulation. Thus, the HCG molecule cannot be detected. The molecule does not undergo this process in the kidney and therefore the molecule remains intact in the urine.

The test detects the presence of brain cancer as early as 29 months before symptoms appear; 27 months for fibrosarcoma of the abdomen; 24 months for skin cancer; 12 months for cancer of the bones (metastasis from breast cancer extirpated 2 years earlier).

Currently, many cancer patients take advantage of the diagnostic accuracy of this test to track the effectiveness of the specific type of treatment they've decided to undergo. Patients follow a simple direction for preparing a dry extract from the urine sample. The powdery extract is mailed to the Navarro Medical Clinic where the HCG testing is performed. (details below)

You send \$55 for the test to a U.S. address (address below) and then include a Xerox copy of the money order or cashier's check in the package you send to the Philippines. Send the powdered urine sample by Global Priority Mail directly to the Philippines. It costs about \$5.50 and takes about 5-6 days to get there.

If you include your e-mail address with the sample, you will get the results in about 7 days. Without the email address, allow 4-6 weeks for test result delivery if they have to be sent to the USA, Canada or Europe. Fed Ex costs over \$47 and regular mail is very slow.

Innovative Test Kit

This test kit is great for those who want to investigate alternative treatments and their potential effects to help get rid of cancer. Paul Winter has an informative website providing for those who are not familiar with these treatments.

#	What	How It Can Help	Contact Details
1.	Alternative Cancer Treatment Test Kit	<p>Paul Winter 's Test Kit provides samples of 12 well-known alternative cancer treatments. The idea is that through using muscle testing or neurofeedback, your body will indicate to you which substance it "needs" the most.</p> <p>The testing will also identify treatments that you should not combine. After you have identified the substance that will have the most impact for your cancer, test each additional substance in turn to see if it might also be used.</p> <p>The Kit is based on the principles of kinesiology and homeopathy. These are new to most people but some, like the British Royal Family, have been staunch supporters for years. Keep an open mind and look at some of the suggested background reading at Paul's site.</p>	<p>For more information and to order a Test Kit for \$48, go to http://alternativecancer.us/ak.htm#Order</p>

For Information On The Success Of Conventional Treatments

Check out the resources below to get the full story on conventional cancer treatments, their cure rates, and side effects. *How Successful are Conventional Cancer Treatments?*, in particular, provides research results that you won't see anywhere else. Read this book and discuss the information with your doctor as you choose options to formulate your own cancer treatment plan.

#	What	How It Can Help	Contact Details
1.	<i>How Successful are Conventional Cancer Treatments?</i>	<p>This e-book is an analysis of the scientific studies used as a basis for conventional treatments, and a lot more. Read this e-book before you have surgery, radiation or chemotherapy. Be fully informed before you consent to treatment! Some points to consider:</p> <ul style="list-style-type: none"> • Conventional treatment for breast cancer does not appear to improve long-term survival rates – and may actually hasten relapse or death. • There is no difference in the survival rates for those who had surgery for prostate cancer and controls who did not! • Keep your Breasts! Mastectomy survival rates are NOT better than for less radical solutions • "Cancer drugs are only effective in a quarter of patients" <p>Read the supporting research data for these and many more topics in <i>How Successful are Conventional Cancer Treatments?</i></p>	You received this report along with the one you're reading now.

2.	Questioning Chemotherapy, Dr. Ralph Moss	<p>"The essential point of the book is that one must question the measure of success in chemotherapy. Oncologists have tended to equate an increasing percentage of "responses" with progress. However, responses are generally measurements of tumor shrinkage, for as little as one month's duration. One cannot automatically assume that a response - even a complete response - will lead to increased survival. One must look for increased survival. Yet the number of cancers for which life prolongation through chemotherapy has been proven through randomized clinical trials is very small. (I do bend over backwards to point these out, when they occur.)</p> <p><i>Questioning Chemotherapy</i> is intended to help patients by providing them with a critical perspective on this now dominant modality." Ralph W. Moss Ph.D.</p>	This book may ordered by clicking here
